Problem

Water damage is one of the most expensive and underestimated risks in homes.

Leaks often go unnoticed for hours or days — causing thousands in damage.

At the same time, water waste continues silently, increasing your bills.

Solution

AquaPulse gives you full control over your water usage.

It monitors your water flow in real time, detects abnormal behavior, and reacts instantly.

In case of a leak, AquaPulse can automatically shut off your water — before damage happens.

How it works

1. Install AquaPulse on your water system
 2. Connect to the web dashboard
 3. Monitor, receive alerts, and control your water anytime
- Simple. Intelligent. Autonomous.

Features

- Real-time water monitoring
- Intelligent leak detection
- Automatic water shutoff
- Cloud dashboard access
- Remote control from anywhere
- Optimized for energy and efficiency

Pricing

AquaPulse Device: €129

Subscription: €3/month

Includes: real-time monitoring, alerts & notifications, cloud access

Call to Action

Be among the first to secure your home.

Pre-order AquaPulse today and take control of your water.

Trust

- Patent Pending
- Designed and engineered in France
- Built by a full-stack and hardware engineer
- Secure and reliable architecture

Story

AquaPulse was inspired by real-world water scarcity.

During a severe drought in Cape Town, strict water restrictions revealed how inefficient and unmanaged water usage can be.

This experience led to the creation of AquaPulse — a smarter way to manage water at home.
